

# 308 Alcaboost

## Caustic soda (25%) to raise the pH-value

- ▲ Considerably increases the pH value in water
- ▲ Can support the effect of flocculants
- ▲ Neutralises the pH value after acidic cleaning
- ▲ Leads to the flocculation of undesired components (e.g. loose metal parts)
- ▲ Highly economical thanks to the very strong product concentration
- ▲ Free from complexing agents and phosphates

### Application

#### Product is suitable for pre-dilution

Apply either undiluted or prediluted to the application with a suitable dosing device. The shelf life of diluted solutions is reduced by the storage conditions and water quality.

#### Water treatment:

For pH neutralisation as intensive treatment.

Add to all basins and water storage tanks where applicable. Add and mix carefully until the desired pH value is reached.

For pH neutralisation as on-going treatment.

Add to the water flow according to the equipment manufacturer's instructions. Adjust the dosage to suit the desired pH value.

#### Note

Always keep containers closed and guide suction tubes through the closure. A change in colour and clouding may occur without any loss in quality due to the natural raw materials. No liability is accepted in case of incorrect and unprofessional use! Not a consumer product according to 1999/44/EC Art. 1! For professional use only!

#### Ingredients

Alkalis.

pH value (concentrate): > 13.5

#### Classification

Classification (in concentrate): GHS05, Danger. H290 May be corrosive to metals. H314 Causes severe skin burns and eye damage. P280 Wear protective gloves/protective clothing/eye protection/face protection. P305+P351+P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. P308+P313 IF exposed or concerned: Get medical advice/attention. Contains: Sodium Hydroxide (INCI)
